EDUCATION

Rutgers University - B.S. in Computer Science, May 2018

WORK EXPERIENCE

MailChimp	Atlanta, GA
Software Engineer, Intern	Summer 2017
<ul style="list-style-type: none">Built MailChimp's new campaign builder using PHP and JavaScript to turn a multi-step process into a single-page checklist, effectively driving campaign completion rate	
Tapslash (Techstars NYC '15)	New York, NY
Software Engineer, Intern	Summer 2016
<ul style="list-style-type: none">Improved Python/Django backend API by creating new service integrations and building new features for Slash Keyboard (ProductHunt Tech Product of the Year '15)Optimized code for faster load times after creating automated testing infrastructure that measured service load times and regressionsWorked on analytics dashboard and service store for platform admin panel using React/Redux	

SIDE PROJECTS

RU Study Buddy

- Web application built with Node.js, MongoDB, React and Redux that allows Rutgers students to search for and connect with potential study partners

Feed

- Web application built with Node.js and MongoDB that allows users to discover content being shared that is more tailored to their interests

FourStops

- Web application built with Python/Flask that creates a road trip by giving users directions to popular sights near any location for a series of stops in transit to their end destination

Guess the Phrase (MHacks 8 Fall 2016)

- Game built with React and the Giphy API where users must guess missing words in idioms using gifs as their only clues

TECHNICAL SKILLS

- Python, Java, C, JavaScript (Node.js, React/Redux), SQL, MongoDB, HTML, CSS
